

The HAV-ACCESS Study

A new type of vascular access MAY be possible!

Who may qualify?

- Subjects with ESRD, who are candidates for an autologous AV fistula or implantation of AV graft for hemodialysis access.
- Subjects currently undergoing dialysis using a catheter and plan to undergo hemodialysis at a dialysis unit for at least the first 6 months after study access creation.
- Suitable anatomy for creation of an AV fistula or implantation of straight or looped graft in either the forearm or upper arm (not crossing the elbow).
